

On the issue of BPL(Broadband over Power Line), I would ask the Commission to deny implementation of this as giving this technology a Part 15 Compliance would cause large ammounts of interference to all spectrum in the 2 to 80 MHz range. This will interfere with Federal, Commercial, and Amateur Operation in the 2 to 80 MHz Ranges. The companies in favor of this are dependant on the Commission granting a Part 15 Compliance to their products without doing extensive research as to long term effects to other users of the spectrum in which they are proposing to occupy. I strongly urge the Commission to require further testing and reporting of long term effects before issuing this grant.
